Seminar

Molecular and systemic analysis of TRAIL resistance in malignant melanoma

Friday, September 24, 13.00 pm
Room 027, Building 28/Pfälzer Platz 2, Uni Campus

Prof. Dr. Dagmar Kulms

Experimental Dermatology
Medical Faculty, TU-Dresden
National Cancer Center (NCT/UCC)

Prof. Kulms’ research is focused on delineating molecular mechanisms that regulate cell death in health and disease, in particular, in malignant melanoma. The Kulms lab uses a combination of novel biochemical tools, patient material, cell-based and systems biology approaches to gain insights into the cell death networks in malignant melanoma. Recent findings will be presented.
